

The HR Prompt Formula

Strong prompts give the model a role, one task, hiring context, output shape, and guardrails.

Field	What to include
Role	Who the AI acts as (e.g., recruitment analyst, interview specialist)
Task	One deliverable (diagnose funnel, draft interview plan, phrase offer)
Context	Role, location (US), stage, company size — no candidate PII
Format	Bullets, table, max length, tone
Constraints	EEO-aware, US formats (\$, MM/DD/YYYY), what to avoid

PROMPT 1 — DIAGNOSE THE FUNNEL

~5-10 MIN

You are a recruitment analyst. Identify where recruitment is stuck and what to change, using the numbers.

Company/location: [company, e.g., New York, NY]

Role location: [e.g., Remote - US, Hybrid - New York, NY, or On-site - Austin, TX]

Role: [job title] State: [two-letter, e.g., NY] Zip Code: [optional]

We have:

- Candidates: [] Interviews: [] Offers: [] Accepted: []

Explain: 1) Where are we most stuck? 2) Why? 3) What can we change this week?

SAMPLE AI OUTPUT — AE ROLE, AUSTIN, TX

Most stuck: interview-to-offer (2 offers from 14 interviews = 14%).

Why: screening passes candidates who miss the discovery competency you score in panel.

This week: tighten the screen with a 3-question discovery probe; calibrate panel on one shared rubric anchor.

This is 2 of 16 pages. The full Beginner guide includes 9 prompts with worked outputs, a fillable 15-minute kickoff worksheet, a 7-point AI safety verify + decision log, and an Advanced upsell — see promptanatomy.help/en/#pdf-guides.
